

Building Information Model (BIM) policy

DMRC are technology consultants servicing the built environment.

We understand the need for BIM standards and have to interact with BIM to exchange data for the sophisticated process automations that we create with our solutions.

For DMRC, BIM is the process which drives the collaborative approach and the required supporting behaviours across all project stakeholders and supply chain members – ensuring the right information is made available to the right people.

DMRC's objectives is to align BIM and its needs to the overall Business key drivers for our clients. DMRC recognise BIM to be an important tool in de-risking projects and providing surety of cost, programme, quality and safety as well as delivering the sustainable outcomes to our clients.

DMRC is fully familiar with all the current ISO 19650 suite of framework standards which allow the implementation of BIM process that can be invoked digitally.

This policy will be reviewed every 24 months.
